

La Batalla / The Battle
Cancer Cell and Healthy Cell ft. P53

Adler

Rapper 1: A Cancer Cell

Rapper 2: A Healthy Cell

Adler Guerrero Zuniga

THE FINAL BATTLE BETWEEN THE DARK SIDE AND THE GOOD SIDE

R1: No longer got a Tumor Suppressor
That is because I became the aggressor
You're still weak, no care-free
living under the command of p53
What are you waiting for?
Immortality?
Join me and then there'll be no fatality
No cell cycle to obey
In lactic acid is how we pay
Oh, pardon
Did you not understand?
I only get bigger, and I know that triggers
Knowing my temporal evolution
I can take any attribution (yuh yuh yuh)
Let's see what you got:
Cuz we know you ain't "that"

R2: You are so wack,
T-Cells go attack (yurr)
You're just delusional
Making lactid acid to survive?
Border line unusable
And You think you're a king? (hahaha)
But you are just a screw up,
Like the prodigal son
Just wait until I am done
But guess what, I brought a friend:

P53 take it away:

Gracias, gracias por tenerme
Yo no vengo a bromear
Yo he venido a matar
Por apoptosis, necrosis
O ferroptosis
Solo se que voy a activar a mi apoptosome
Y con eso ya.
Ya basta, pobre sabandija sal de aca
Super sayayin me volvere
Para derrotarte como a Cell
Y si no se puede yo llamare
A Carlos
con su equipo elite
descubrira la cura contra ti vamos a buscar.

Science Explanation:

This rap song is about Rapper 1, a cancerous cell, roasting Rapper 2, a regular cell. Rapper 1 starts by showing off how after he got rid of the tumor suppressors, he became an aggressor to his environment. He laughs at the healthy cell because he knows if something in his DNA goes wrong he will die due to p53 checking for mutations during cell cycle. He also mentions how he does not obey the cell cycle, therefore he is immortal in the sense that he usually does not reach senescence. He also explains that his different ways are better since he makes lactic acid and gets the ATP a lot faster than the common way the regular cell does it.

On the second verse Rapper 2 calls out the cancerous cell for being a screw up, meaning his many mutations that cause GOF and LOF. He also points out that his mitochondrial oxidative phosphorylation is much better than the Warburg effect the cancer cell does. Rapper 2 calls the cancerous cell a “prodigal son” like the fable because the cancer cell used to be a good cell that has gone bad and is betraying its role in the cell’s environment. So he calls tumor suppressor p53:

P53 is the foreign friend because Rapper 1 does not remember p53 since they lost connection some time ago due to LOF (ergo that is why he speaks in Spanish). The p53 mentions how now that he has gain function he is no longer going to wait around. He will kill the cancerous cell via activating apoptosis. (I added necrosis and ferroptosis for rhyme rather than scientific truth). And he says if he fails he is counting on Professor Carmona’s lab to get the cure to get rid of this cancer cell.
